Contract Review

Contract Name	TheWeb3Project
Compiler Version	v0.8.2+commit.661d1103
Optimization	200 runs
Licence	None
Explorer	https://bscscan.com/address/0x43cBE67cAb2A16c1A11e125c6aBd6917970f4d08
Symbol	WEB3
Decimals	18
Total Supply	10,000,000,000
Source	contract.sol
Domain	theweb3project.com

Audit Updates

Initial Audit	9th February 2022
Corrected	

Contract Analysis

● Critical ● Medium ● Minor ● Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

Max Transaction Amount

The contract contains a maximum transaction limitation. The amount that is going to be transferred cannot be more than the 11% of the liquidity pool. That means that users will not be able to transfer the tokens if the liquidity pool is removed or decreased enough. If the liquidity pool decreased dramatically then the maximum transferable amount will practically not allow the users to proceed with transfers.

Transaction Fees

Transfers are taxed between 0% - 20% proportionally impact that the transferred amount will make to the liquidity pool. For instance, if the amount is 0,01% of the liquidity pool, the tax will be low. On the other hand, if the amount is 9% of the liquidity pool, the tax will be high.

Notes

- The amount of $1/1^{18}$ is deducted from the amount of each transfer.
- Users are limited to making one transfer every minute.
- The contract is part of a proxy mechanism, it is not a token by default but it acts like a token when it is embedded in a proxy implementation.

Contract Diagnostics

● Critical ● Medium ● Minor

Severity	Code	Description
●	L01	Public Function could be Declared External
●	L02	State Variables could be Declared Constant
●	L03	Redundant Statements
●	L04	Conformance to Solidity Naming Conventions
●	L09	Dead Code Elimination
●	L07	Missing Events Arithmetic
●	L14	Uninitialized Variables in Local Scope

L02 - State Variables could be Declared Constant

Criticality

minor

Location

TheWeb3Project.sol#L313,315,312,218,217

Description

Constant state variables should be declared constant to save gas.

```
_uniswapV2Router  
_uniswapV2Pair  
_freeAirdropSystem  
...
```

Recommendation

Add the constant attribute to state variables that never change.

L03 - Redundant Statements

Criticality

minor

Location

TheWeb3Project.sol#L990,991,1206,1207

Description

Detect the usage of redundant statements that have no effect.

```
sender;  
recipient;  
...
```

Recommendation

Remove redundant statements if they congest code but offer no value.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	TheWeb3Project.sol#L119,1732,1742,2034,2109,2223 and 48 more

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow `_` at the beginning of the mixed_case match for private variables and unused parameters.

```
_monitors  
_lifeSupports  
_firstPenguinWasBuy  
...
```

Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>

L09 - Dead Code Elimination

Criticality	minor
Location	TheWeb3Project.sol#L90,94,1732,1742,2234,2203 and 3 more

Description

Functions that are not used in the contract, and make the code's size bigger.

```
sortTokens  
priceRecoveryBuy  
getReserves  
...
```

Recommendation

Remove unused functions.

L07 - Missing Events Arithmetic

Criticality

minor

Location

TheWeb3Project.sol#L1190

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
_lastLpSupply = amount
```

Recommendation

Emit an event for critical parameter changes.

L14 - Uninitialized Variables in Local Scope

Criticality

minor

Location

TheWeb3Project.sol#L1765,1771

Description

These are variables that are defined in the local scope and are not initialized.

```
sellFee  
redistTokenAmount
```

Recommendation

All the local scoped variables should be initialized.

Summary

Web3 project is aiming to increase the general public adoption of web3. The smart contract analysis did not report any major issues. The contract contains custom functionality with a lot of diversion from a typical ERC20 implementation.

The contract manually applies the buy and sell functionality. Many code segments could be written better and save gas. The audit mentions some optimizations, limitations and notes regarding the contract functionality.

The audited contract is currently used from the proxy contract `0x333FD139cAeF6Aa31056cC905987b77B1044d259` at the time of the Audit Analysis that takes place 14 Feb 18.00 p.m UTC.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.
